KATLEGO NKUNA

Software Developer · Frontend · AI-Augmented Builder

katlegonkunajr@gmail.com | linkedin.com/in/katlegonkuna | Kempton Park, South Africa

AI Tools: Claude Code · Cursor AI · JetBrains (Rider / WebStorm) · GitHub Copilot — I ship faster and smarter by pairing deep problem-solving with the right AI tools.

PROFESSIONAL SUMMARY

Software developer with **6+ years** of frontend-focused experience building production-grade web and mobile applications for the **South African fintech and banking sector** — including FNB, ABSA, Standard Bank and Nedbank. Proficient in React, Angular and Vue, with growing full-stack capability in .NET/C#, Node.js and Azure. I approach every problem as an engineer first and a programmer second: I diagnose root causes, weigh trade-offs, then build clean, maintainable solutions. I actively pair deep problem-solving with AI development tools (Claude Code, Cursor AI, JetBrains) to ship faster without sacrificing quality. Equally comfortable owning a UI component library, integrating a REST API, or collaborating with a cross-functional Agile team to deliver high-stakes payment software on time.

CORE COMPETENCIES

Languages	TypeScript · JavaScript (ES2022+) · C# · Java · Kotlin · HTML5 · CSS3
Frontend Frameworks	React 18 · Angular 17+ · Vue 3 · React Native · Next.js (learning) · SASS/LESS · Tailwind CSS
State & Architecture	Redux · NgRx · RxJS · Component-Driven Design · Micro-Frontend patterns · REST API integration
Backend & APIs	.NET Core / .NET 6+ · ASP.NET Core · Node.js · Express.js · RESTful APIs · Microservices
Cloud & DevOps	Microsoft Azure (Functions · App Services · Service Bus · API Management) · Azure DevOps · CI/CD · Git · GitHub
Databases	SQL Server · MongoDB · RESTful data design · ORM basics (Entity Framework)
Testing & Quality	Jest · Cypress (E2E) · Jasmine · Karma · Unit testing · TDD principles · Code review
Design & UX	Figma · Adobe XD · Wireframing · High-fidelity prototyping · Responsive design · Accessibility (WCAG basics)
AI Dev Tooling	Claude Code · Cursor AI · JetBrains Rider & WebStorm AI · GitHub Copilot · AI-assisted code review & refactoring
Workflow	Agile / Scrum · Jira · Confluence · Postman · VS Code · SDLC · Cross-functional team collaboration

EXPERIENCE

Software Developer (Frontend & Full-Stack)

Dashpay – Merchant Solutions · Sandton

August 2023 – Present

Fintech | Banking | POS & Payment Terminals | Angular · Vue · React Native · C# · Java

- Developed **GetPaid+** — an inventory management and reporting platform for small merchants, built for **FNB SA** — using React Native (mobile) and Angular (web), giving merchants real-time visibility into stock, sales and business performance.
- Built **ARMS**, a POS terminal management platform for FNB, ABSA, Standard Bank and Nedbank, streamlining device onboarding and repair workflows for thousands of terminals nationwide.
- Developed features in **Dashpay POS**, a generic payment application deployed for Dashpay, ABSA and Standard Bank, using Java, Kotlin and XML on Android-based terminals.
- Designed and shipped **Lighthouse**, a real-time service monitoring dashboard in Angular, providing live alerts and alarms for banking APIs — directly improving system uptime and incident response time.
- Owned end-to-end UI/UX design using **Figma and Adobe XD**: wireframes, user flows, and high-fidelity prototypes for microPOS and generic payment interfaces.
- Integrated **REST APIs** across multiple banking platforms; collaborated daily with backend engineers, BAs, DBAs, Product Owners and Scrum Masters in a fast-paced Agile environment.
- Adopted **Claude Code and Cursor AI** as core development tools, reducing boilerplate authoring time and accelerating code reviews and refactoring cycles.

Web Developer

Umshiny IT Solutions · Nelspruit, South Africa

December 2020 – June 2023

Full-Stack Web | MERN · Angular · .NET/C# · WordPress | React · Node.js · MongoDB

- Built and maintained **10+ responsive web applications** using React and Angular, ensuring cross-browser compatibility and mobile-first performance for SME clients.
- Delivered full-stack features within the **MERN stack** (MongoDB, Express, React, Node.js) and **.NET/C#**, owning both the UI and API layers end-to-end.
- Introduced a reusable **React component library** across projects, cutting average feature delivery time by standardising state management and routing patterns.
- Authored comprehensive **unit and integration tests** using Jest and Cypress, establishing a testing culture that reduced production bug counts on key client sites.
- Extended WordPress sites with custom plugins and third-party APIs, delivering bespoke user experiences for e-commerce and services clients.
- Produced detailed **Figma wireframes and prototypes** that shortened client feedback cycles by aligning on UX before writing a single line of code.

Web Development Intern

MB Communications & Projects · Kempton Park, South Africa

June 2019 – November 2020

Angular · TypeScript · C# | Foundational full-stack exposure

- Built and tested reusable **Angular components** using TypeScript and C#, learning to manage component state, routing, and service injection in real production codebases.
- Wrote unit tests using **Jasmine and Karma**, developing an early habit of test-driven quality assurance.
- Diagnosed and resolved front-end bugs under senior supervision, sharpening systematic problem-solving skills that remain core to my approach today.

WHAT MAKES ME DIFFERENT

Problem-solver first	I diagnose before I code. I map the problem, consider trade-offs, then choose the right tool — not the familiar one.
AI-native workflow	I use Claude Code, Cursor AI, JetBrains AI and Copilot as daily pair programmers — shipping production-quality code faster without cutting corners.
Fintech domain depth	Hands-on experience with South Africa's major banks (FNB, ABSA, Standard Bank, Nedbank) across POS, microPOS, portals and monitoring — rare for a mid-level developer.
Frontend → Full-Stack path	Strong frontend foundations (React, Angular, Vue) actively broadening into backend (.NET, Node.js) and cloud (Azure) — versatile without overclaiming depth.

EDUCATION

BCom Informatics — Information Systems

University of Pretoria

2018 – 2020

Covered systems analysis and design, database management, software development, business information systems, and IT project management. Built a strong foundation in how technology solves real business problems — a perspective that directly shapes how I approach software design today.

Generic Management Certificate — Business, Marketing & Related Support Services

Training Force

2023 – 2024

Practical training in management principles, business communication, marketing fundamentals and operational planning. Strengthened the ability to operate effectively within organisational structures, engage stakeholders, and contribute beyond a purely technical role.
